Applications

For monitoring three-phase networks for undervoltage, overvoltage, phase sequence, asymmetry, power failure.

Indication

1. LED A1 / A2: on, when operating voltage present
2. LED U_{max} : on, in event of overvoltage
3. LED U_{min} : on, in event of undervoltage
4. LED Δ : on, in event of:
 - asymmetry
 - incorrect phase sequence
 - power failure
5. LED: on, when output relay activated

Notes

Measurement procedures: arithmetical mean value measurement over several half-waves of rectified phase voltages L1/L2 and L2/L3. Reference phase is L3. Networks with or without neutral can be monitored. The auxiliary voltage to be applied to A1/A2 can also be taken from the three-phase network which is to be monitored. This reduces to 0.8 - 1.1 U_n the permitted range of voltage of the network to be monitored.

BD 9080.12/200:

indicates only under- and overvoltage

with extended temperature range of

- 40 ... + 70 °C

Remark

At an ambient temperature of + 70°C the device has to be mounted with 2 cm space to the neighbour units and the necessary air circulation must be provided.

The contact current must not be more then 2 A.

The life of the product may be reduced by the higher ambient temperature!
